#92-7

Dear Mr. Brown:

Approval of OPW #1 Spill Containers

Models 1C-4500, 1-4500, 1C-4580, 1-4580 of the OPW #1 spill container have met the requirements for California Air Resources Board (CARB) certification. Our evaluation of this equipment indicated that the operation and durability will be satisfactory.

As required by CARB certification and test procedures, you requested the approval of the Division of Occupational Health and Safety, the Office of the State Fire Marshal, and the Department of Food and Agriculture, Division of Measurement Standards. The necessary approvals have been obtained from these agencies.

You also requested approval of four other models of the spill container which have a capacity of 3.6 gallons. Title 23 of the California Code of Regulations, Division 3, Chapter 16, Section 2635(c)(1)(B) requires a minimum capacity of five gallons for water quality control. Consequently, the smaller spill containers cannot be certified.

I find that use of the five-gallon OPW #1 spill containers will not adversely affect the performance of gasoline vapor recovery systems. Therefore, Models 1C-4500, 1-4500, 1C-4580, and 1-4580 are approved for use with Phase I gasoline vapor recovery systems in California.

If you have any questions, please call Darrell Hawkins at (916) 324-7343 or Laura McKinney at (916) 327-1525.

Sincerely,

A handwritten signature in black ink, appearing to read "J. Morgester", written over a horizontal line.
